

Get Started with SenseCAP Indicator

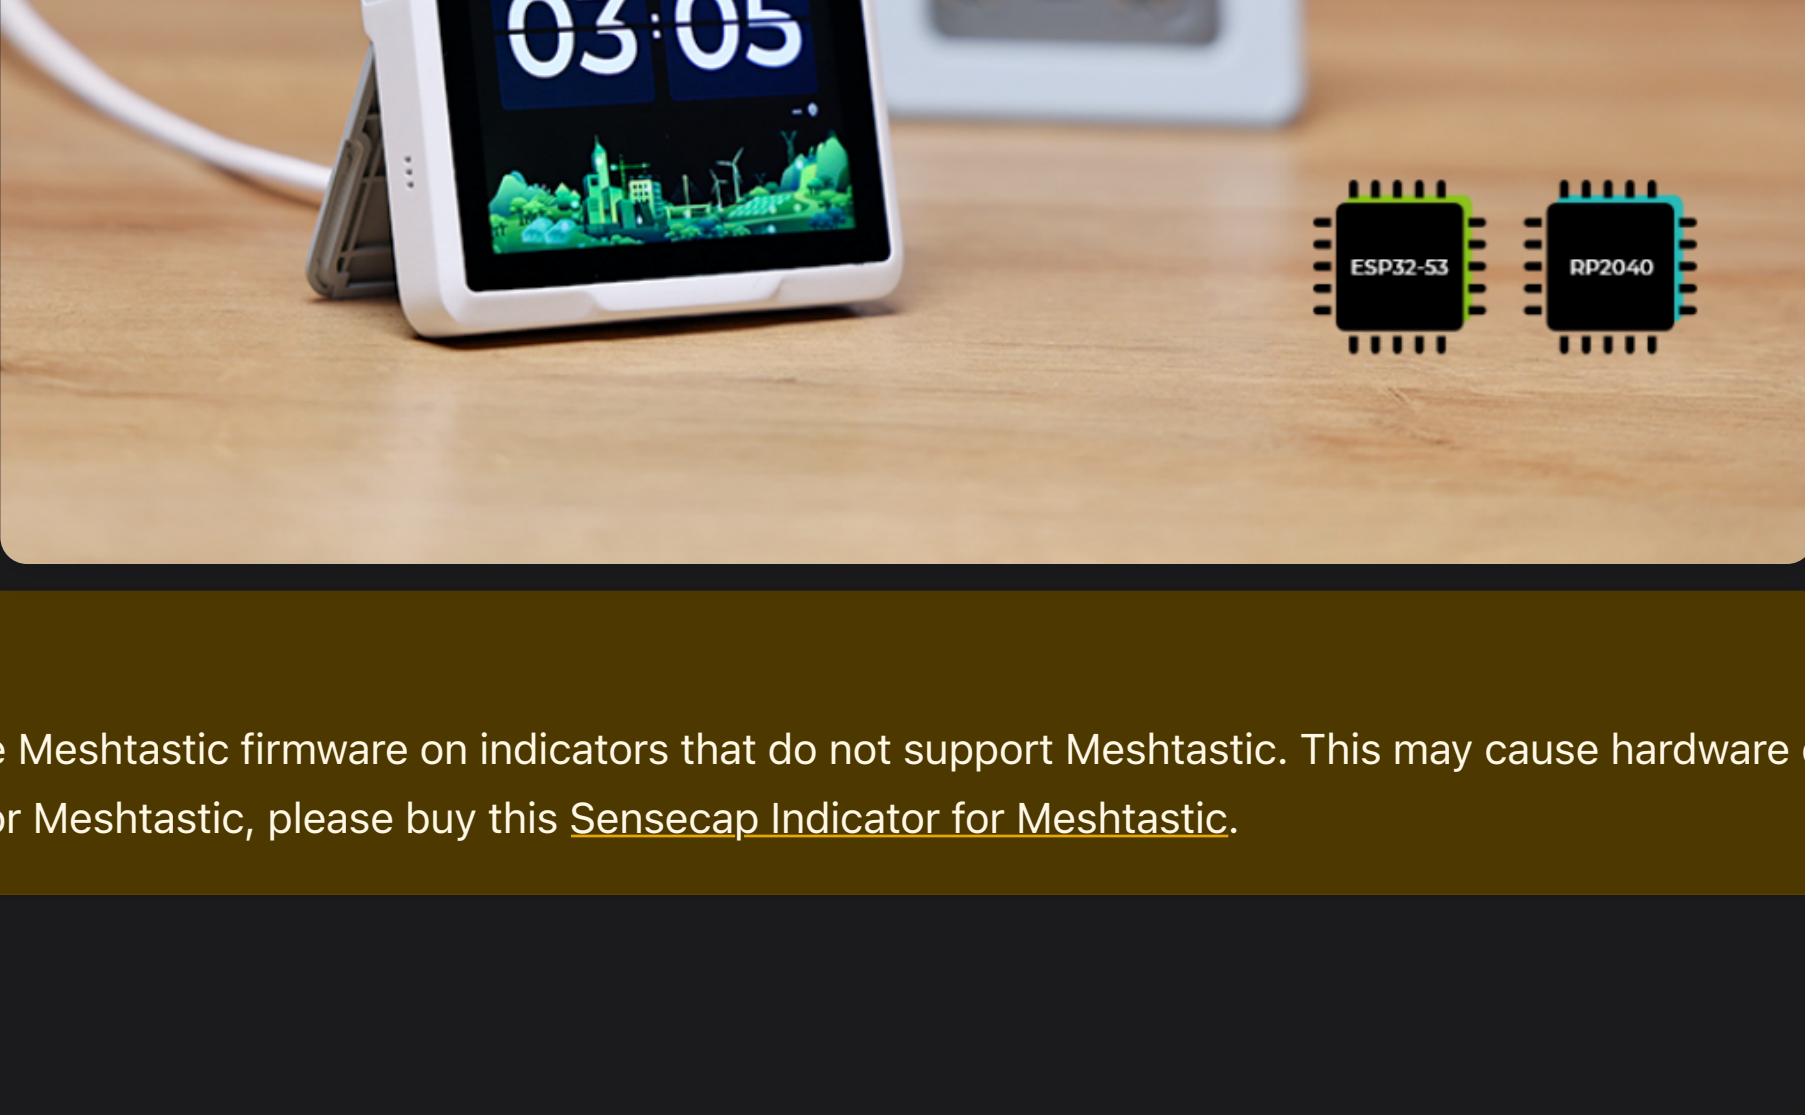

Overview

SenseCAP Indicator is a 4-inch touch screen driven by ESP32-S3 and RP2040 Dual-MCU and supports Wi-Fi/Bluetooth/LoRa communication.

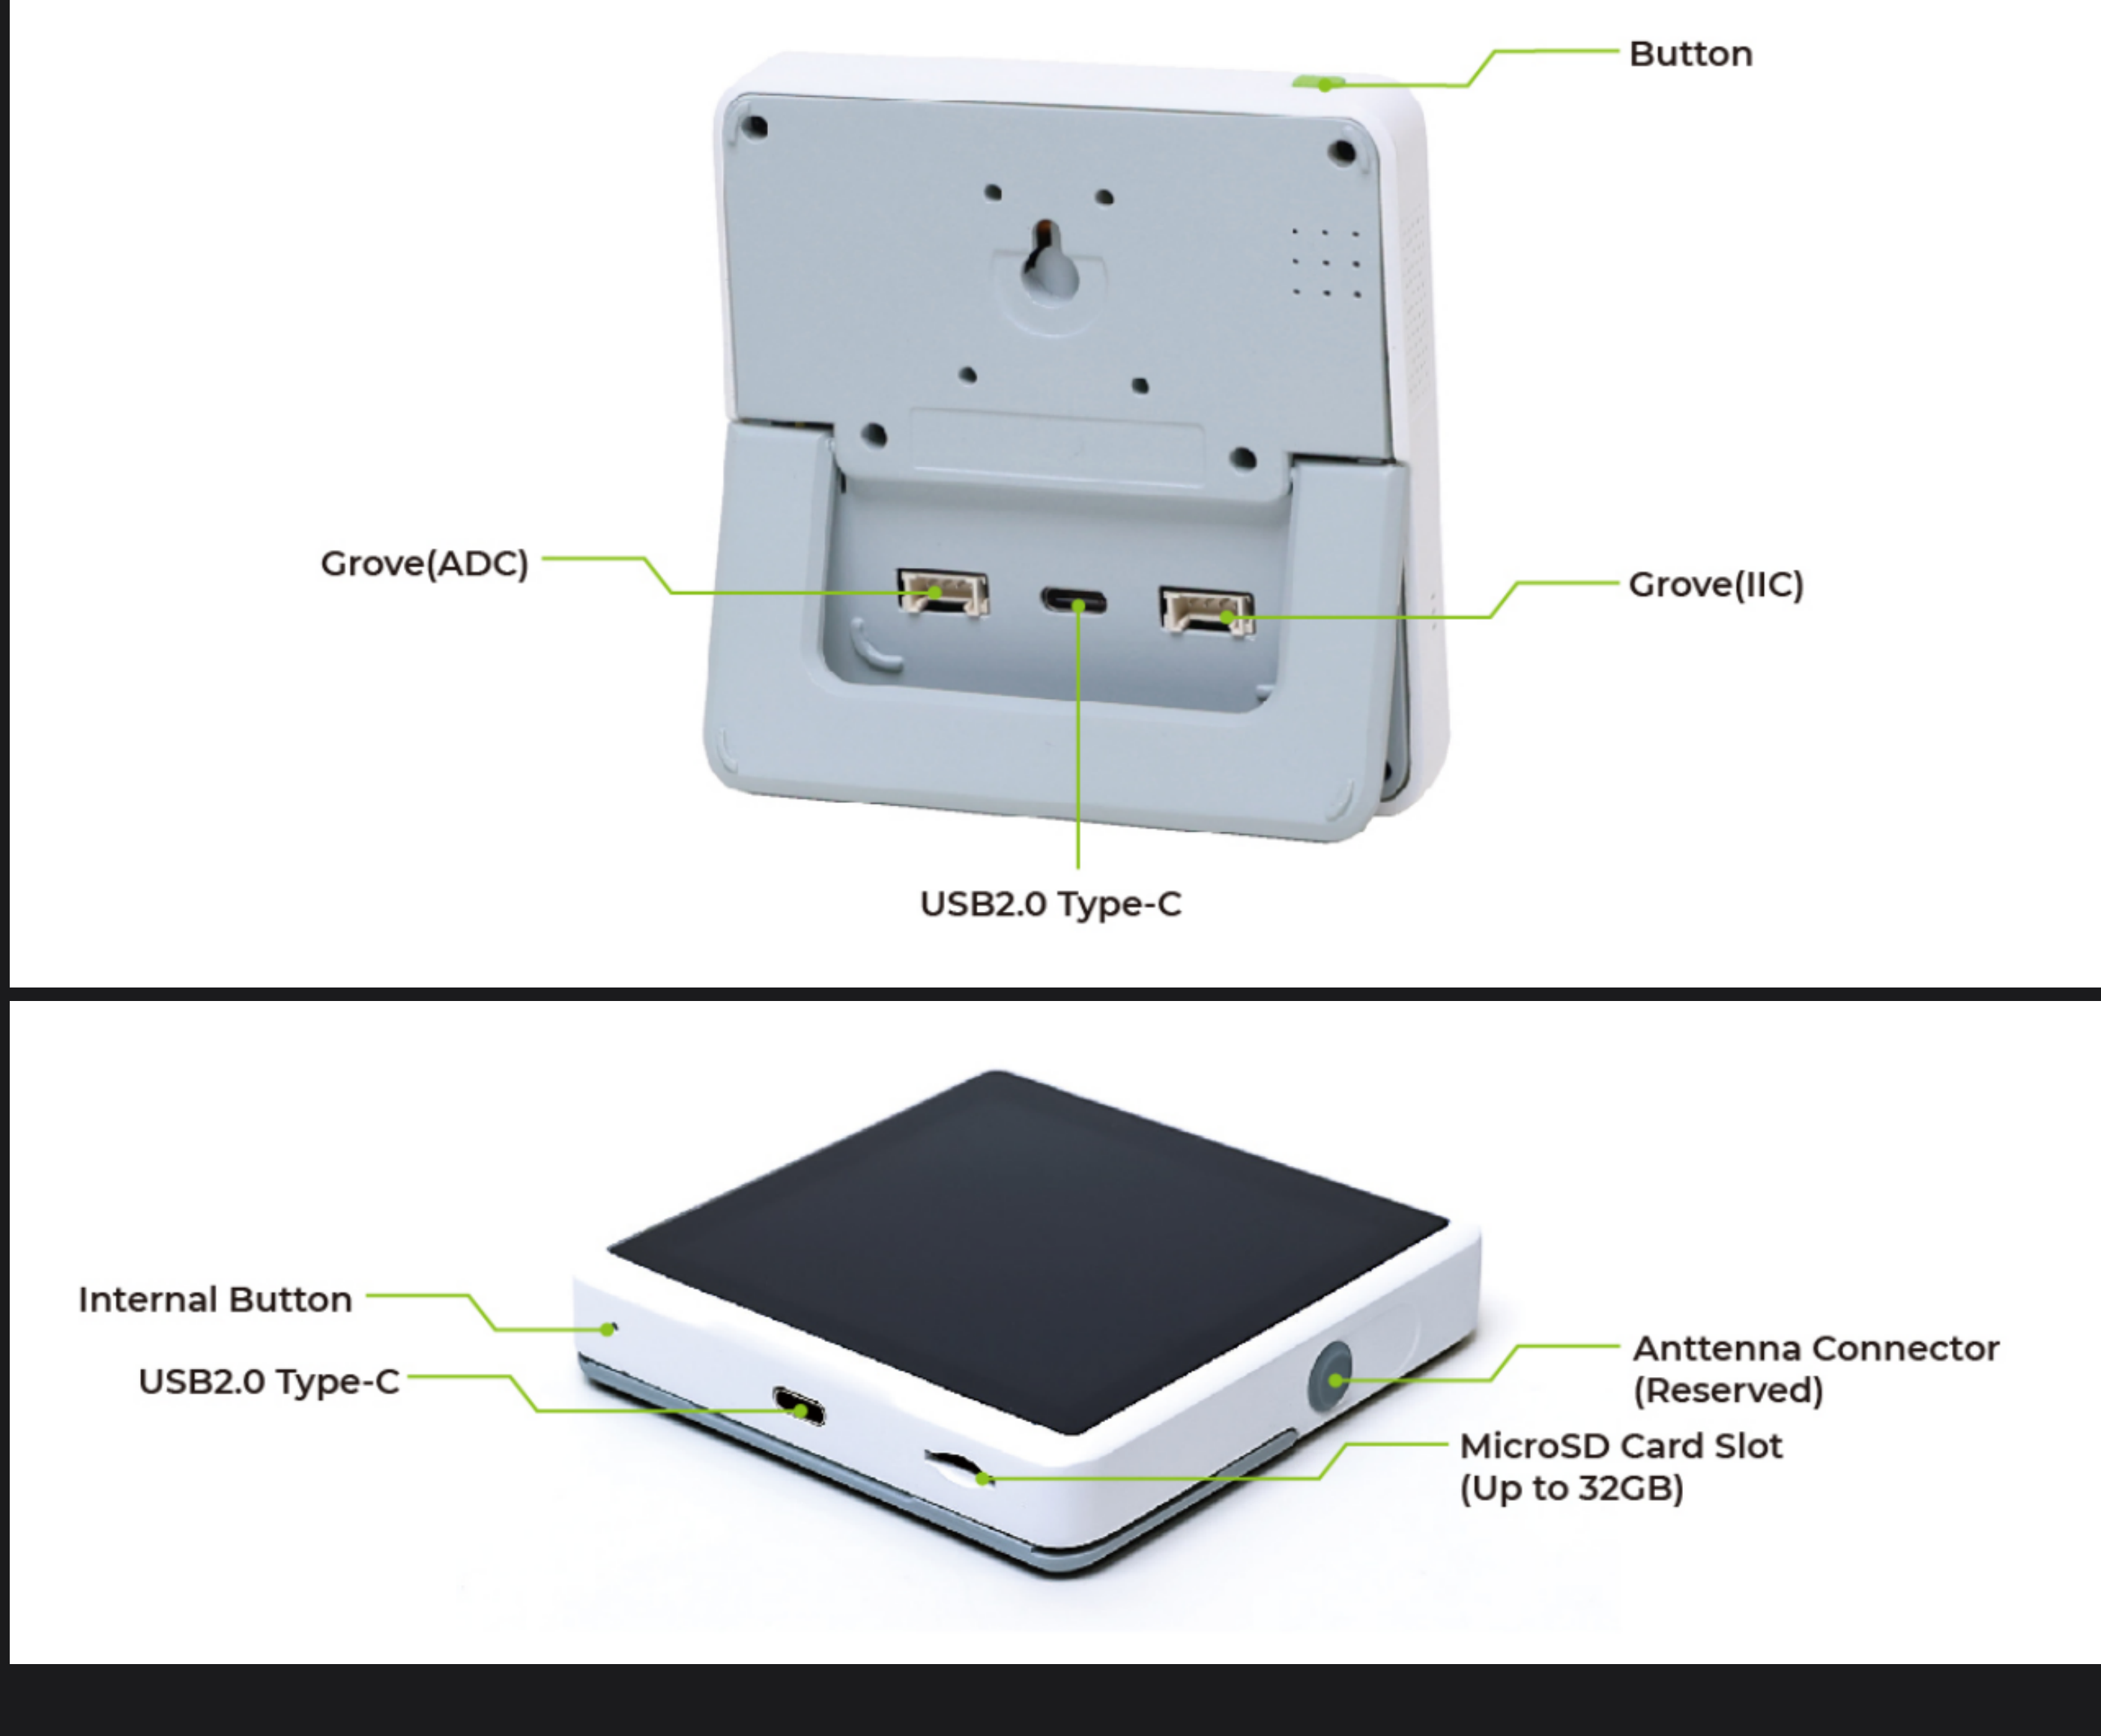

The device comes two Grove interfaces, which supports ADC and I2C transmission protocols, and two USB Type-C ports with GPIO expansion pins inside, so user can easily expand external accessories via USB port.

SenseCAP Indicator is a fully open source powerful IoT development platform for developers. One-stop ODM Fusion service is also available for customization and quick scale-up.

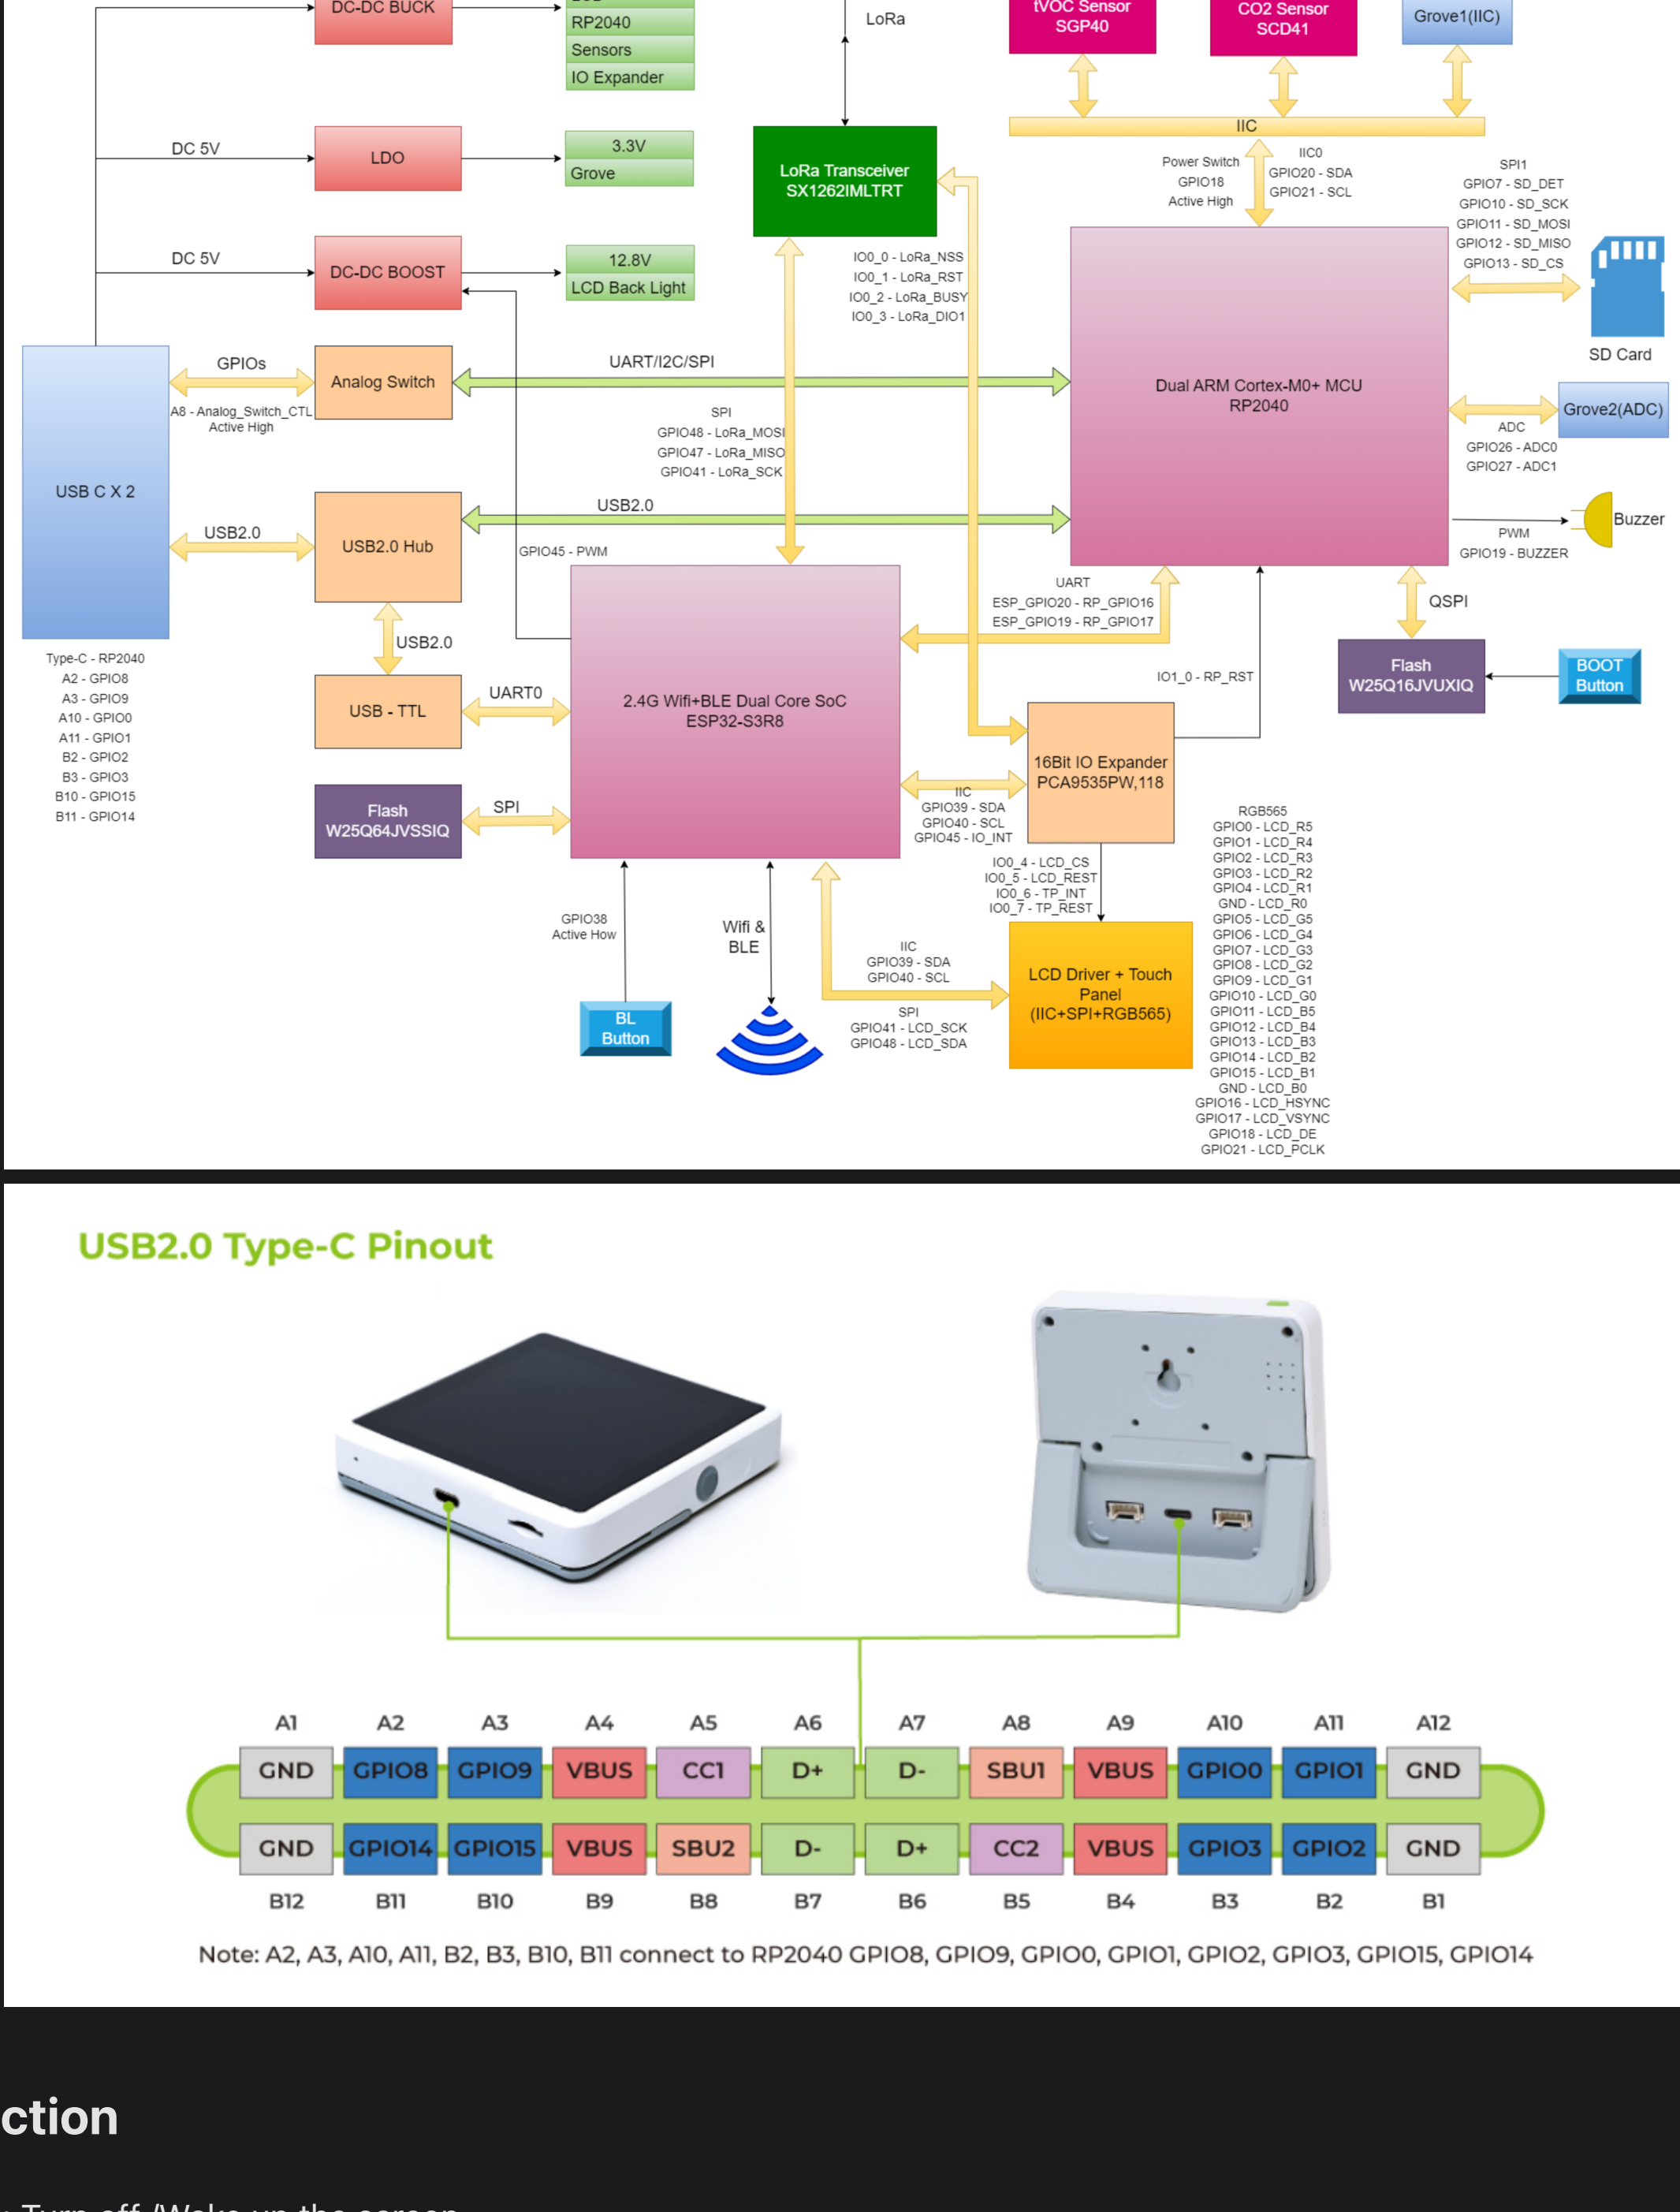

- NOTE**
- Please do not flash the Meshtastic firmware on indicators that do not support Meshtastic. This may cause hardware damage. If you want to purchase the device for Meshtastic, please buy this Sensecap Indicator for Meshtastic.
- Features**
- Dual MCUs and Rich GPIOs** Equipped with powerful ESP32S3 and RP2040 dual MCUs and over 400 Grove-compatible GPIOs for flexible expansion options.
 - Real-time Air Quality Monitoring** Built-in tVOC and CO2 sensors, and an external Grove AHT20 TH sensor for more precise temperature and humidity readings.
 - Local LoRa Hub for IoT Connectivity** Integrated Semtech SX1262 LoRa chip (optional) for connecting LoRa devices to popular IoT platforms such as Matter via Wi-Fi, without the need for additional compatible devices.
 - Fully Open Source Platform** Leverage the extensive ESP32 and Raspberry Pi open source ecosystem for infinite application possibilities.
 - Fusion ODM Service Available** Seede Studio also provides one-stop ODM service for quick customization and scale-up to meet various needs.(please contact iot@seede.cc)
